DEEPSHIELD

Adaptive Explainable Deepfake Detection & Forensic Localization Report

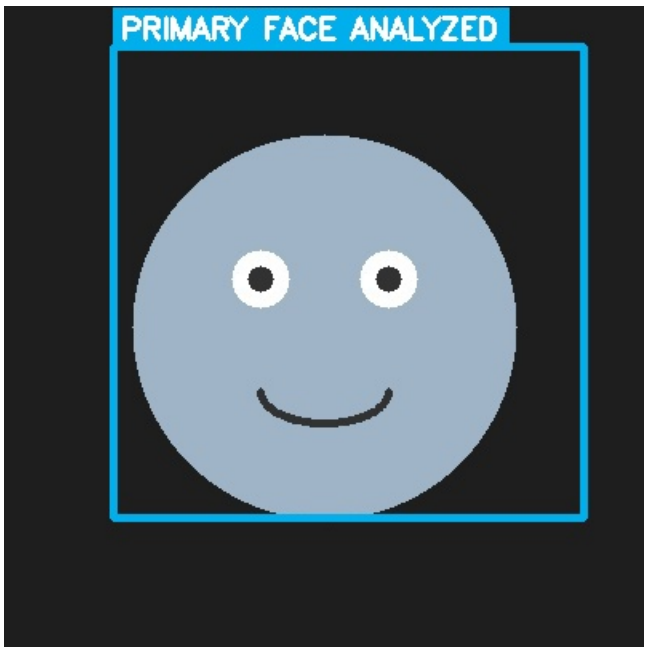
Report ID:	2047d7dc	**Date/Time:**	2026-10-07 21:21:53
File Name:	test_synthetic_face.jpg	**Media Type:**	Image
Verdict:	**REAL**	**Suspicion Score:**	**23.4%**

1. Multi-Signal Evidence Breakdown

Signal Modality	Technique Used	Suspicion Level
Visual Evidence	EfficientNetB0 Spatial CNN	15.0%
Frequency Evidence	2D FFT Spectrum Energy Ratio	40.2%
Behavioral Evidence	MediaPipe Temporal Eye Blinking (EAR)	N/A (Image Mode)

2. Forensic Peak Frame Localization

The image below illustrates the frame with the highest suspicion score (23.4%) extracted at timestamp **0.00s** (Frame N/A). The primary detected facial region is bounded below:



4. Explainable Evidence Interpretation

"VERDICT: LIKELY AUTHENTIC MEDIA (Overall Suspicion: 23.4%). Natural visual facial characteristics detected. Standard spatial frequency distribution observed."

5. Forensic Disclaimers & System Limitations

Notice: DeepShield provides an AI-assisted detection score based on multi-signal feature heuristics, spatial CNN patterns, and frequency domain anomalies. This output does not constitute absolute legal or forensic proof of manipulation. Low-resolution media, extreme compression, or irregular lighting conditions may affect facial feature extraction accuracy.
