DEEPSHIELD

Adaptive Explainable Deepfake Detection & Forensic Localization Report

Report ID:	d6914025	**Date/Time:**	2026-10-07 21:54:35
File Name:	d6914025_fake-adgwpnyltr-0.mp4	**Media Type:**	Video
Verdict:	**SUSPICIOUS**	**Suspicion Score:**	**55.5%**
Duration:	10.0s	**Frames Analyzed:**	30
Peak Frame:	Frame 220	**Peak Timestamp:**	7.33s

1. Multi-Signal Evidence Breakdown

Signal Modality	Technique Used	Suspicion Level
Visual Evidence	EfficientNetB0 Spatial CNN	58.2%
Frequency Evidence	2D FFT Spectrum Energy Ratio	91.0%
Behavioral Evidence	MediaPipe Temporal Eye Blinking (EAR)	10.0%

2. Forensic Peak Frame Localization

The image below illustrates the frame with the highest suspicion score (55.5%) extracted at timestamp **7.33s** (Frame 220). The primary detected facial region is bounded below:

3. Suspicious Time Segments Detected

No continuous time segment exceeded the suspicion threshold (0.70).

4. Explainable Evidence Interpretation

"VERDICT: MODERATE ANOMALY DETECTED (Overall Suspicion: 55.5%). Moderate spatial variations detected in facial boundary regions. Abnormal frequency spectrum: FFT analysis indicates high-frequency synthetic blending artifacts. Natural eye blinking pattern and eye movement verified."

5. Forensic Disclaimers & System Limitations

Notice: DeepShield provides an AI-assisted detection score based on multi-signal feature heuristics, spatial CNN patterns, and frequency domain anomalies. This output does not constitute absolute legal or forensic proof of manipulation. Low-resolution media, extreme compression, or irregular lighting conditions may affect facial feature extraction accuracy.
